Frame Rate Emulator

Optimised for smooth playback in all SD, HD, 4K & 5K resolutions at all available frame rates from 23.98 to 60fps.

The “Effect” is applied to a clip as normal. If any transform/crop properties are to be key framed in the inspector this should be done first, followed by the clip being added to a “Compound Clip” with the “Frame Rate Emulator” effect being applied to that.

The “Project Frame Rate” is set to match your FCP project, this is what your true output video frame rate will be.

The “Emulation Frame Rate” is set to either 3, 6, 12, 18 or 24 frames per second. This is how your output video will appear to look. Any film style looks can be created on the colour board or well though out camera work can appear to look like stop motion photography.
